Features

- 2-channel isolated barrier
- 115 V AC supply
- Dry contact or NAMUR inputs
- · Relay contact output
- · Line fault detection (LFD)
- · Reversible mode of operation
- Up to SIL2 acc. to IEC 61508/IEC 61511

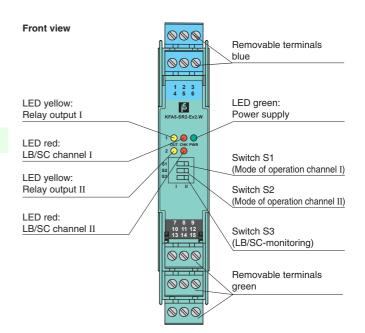

Function

This isolated barrier is used for intrinsic safety applications. It transfers digital signals (NAMUR sensors/mechanical contacts) from a hazardous area to a safe area.

The proximity sensor or switch controls a form C changeover relay contact for the safe area load. The normal output state can be reversed using switches S1 and S2. Switch S3 is used to enable or disable line fault detection of the field circuit.

During an error condition, the relays revert to their deenergized state and the LEDs indicate the fault according to NAMUR NE44.

Configuration

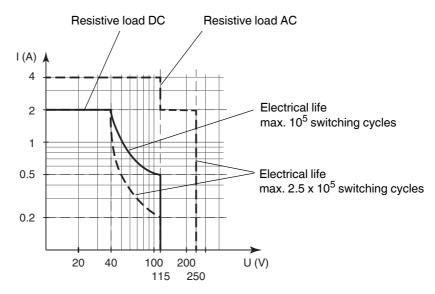

Switch position

S	Function		Position
1	Mode of operation	with high input current	ı
	Output I (relay) energized	with low input current	II
2	Mode of operation	with high input current	I
	Output II (relay) energized	with low input current	II
3	Line fault detection	ON	ı
		OFF	II

Operating status

Control circuit	Input signal
Initiator high impedance/ contact opened	low input current
Initiator low impedance/ contact closed	high input current
Lead breakage, lead short-circuit	Line fault

Factory settings: switch 1, 2 and 3 in position I

The maximum number of switching cycles is depending on the electrical load and may be higher when reduced currents and voltages are applied.
